

Alok Yadav

Lucknow, Uttar Pradesh, India | +91 7458814280 | yalok8678@gmail.com | LinkedIn | GitHub | LeetCode

Professional Summary

Java Backend Developer specializing in **Java, Spring Boot, Spring Security, Spring Cloud, Microservices, REST APIs, MySQL, Redis, Apache Kafka, Docker, and Kubernetes**. Experienced in developing secure and scalable backend applications using **JWT authentication, RBAC, JPA/Hibernate**, caching, event-driven architecture, payment gateway integration, API Gateway, service discovery, and fault tolerance. Strong foundation in DSA, OOP, DBMS, OS, and Computer Networks, with **200+ DSA problems solved on LeetCode**.

Technical Skills

Languages: Java, SQL, JavaScript, Python

Security: Spring Security, JWT Authentication, RBAC

Databases: MySQL, Redis

Messaging & Architecture: Apache Kafka, Event-Driven Architecture, API Gateway, Service Discovery, OpenFeign

Resilience: Resilience4j, Circuit Breaker, Retry, Rate Limiter

API & Testing: Swagger/OpenAPI, Postman, Razorpay Payment Gateway

DevOps & Tools: Docker, Kubernetes, Git, GitHub

Projects

FoodVerse – Advanced Food Delivery Platform | *Java, Spring Boot, MySQL, Redis, Kafka, Docker, Kubernetes*

- GitHub Repository
- Built a modular food delivery backend using **Spring Boot**, covering users, restaurants, menus, carts, orders, payments, delivery, and admin operations.
- Developed **25+ REST APIs** using **Spring MVC, Spring Data JPA, Hibernate**, and **MySQL** with DTOs, validation, pagination, filtering, and centralized exception handling.
- Implemented **Spring Security + JWT Authentication** with **Role-Based Access Control (RBAC)** for customers, restaurant owners, delivery partners, and administrators.
- Implemented **Redis caching** for frequently accessed restaurant and menu data to improve response performance and reduce database load.
- Integrated **Apache Kafka** for asynchronous order, payment, restaurant, and delivery events using event-driven architecture.
- Integrated the **Razorpay Payment Gateway** for online payments, including payment-order creation, payment verification, transaction status handling, and idempotent order processing.
- Implemented **Resilience4j Circuit Breaker, Retry, Rate Limiter**, and **Fallback** mechanisms for fault-tolerant backend operations.
- Documented APIs using **Swagger/OpenAPI**, tested REST APIs with **Postman**, and added **Spring Boot Actuator** health checks and structured logging.
- Containerized the application using **Docker** and prepared **Kubernetes** configurations for deployment and scaling.

Education

Babu Banarasi Das University

Lucknow, Uttar Pradesh, India

B.Tech (Lateral Entry) – Computer Science and Engineering — GPA: 8.43 / 10.0

May 2024 – June 2027

- Coursework: Data Structures & Algorithms, DBMS, Operating Systems, OOP, Computer Networks.

Veer Bahadur Singh Purvanchal University

Jaunpur, Uttar Pradesh, India

B.Sc. – Bachelors of Science (Mathematics)

2020 – 2023

Achievements & Activities

Solved **200+ DSA problems** on LeetCode.

Built backend applications using **Java** and **Spring Boot** with security, databases, caching, Kafka, resilience, payments, Docker, and Kubernetes; maintained structured GitHub repositories.
